Drake Primary School Management plan and Environmental impact assessment for Forest school site in school grounds 2022 - 2023

Location: IP24 IJW

Management objective:

Forest schools is in a specific location/area that has been chosen for our site within the school grounds. This area provides a developing wooded area for the children to learn and thrive whilst participating in child-led play. We will learn about nature and the environment, not only how to look after it, but will also have an increased appreciation and respect for our surroundings.

The site is managed to encompass habitat creation through the use of bug hotels, bird boxes, log piles etc. and the continued maintenance of trees, shrubs and plants along with planting trees and wild flower seeds. Photos taken throughout the year are compared to previous photos to so we can monitor the impact.

Trees present on this site:

Silver Birch
(Betula Pendula)

Field Maple (Acer Campestre)

Sycamore Maple (Acer Pseudoplatanus)

European Hornbeam (Carpinus betulus)

European Ash (Fraxinus excelsior)

Scots Pine (Pinus sylvestris)

Swedish Whitebeam (sorbus intermedia)

small-leaved lime (tilia cordata)

Species of Shrubs present on this site:

Hazel (corylus avellana)

Dogwood (cornus sanguinea)

Hawthorn (crataegus monogyna)

Elder (Sambucas Nigra)

Native hedgerow boundary planting

Field Maple (Acer Campestre)

Hazel (corylus avellana)

Dogwood (cornus sanguinea)

Spindle (Euonymus europaeus)

Crab Apple (Malus sylvestri)

Elder (Sambucas Nigra)

Wayfaring (viburnum lantana)

guelder-rose (Viburnum Opulus)

Flowers/planting

Clematis Vistula

Narcissus (Daffodils)

Pseudonarcissus (Wild Daffodils)

Species of birds seen in and around our site:

Wood Pidgeon's

Robins

Collared Doves

Crows

Magpies

Barn Owl

Species of insects seen in our forest school site:

Ladybirds

Slugs

Snails

Ladybird Larvae

Hover Flies

Stag Beetles

Green June Beetles

Cardinal Beetle

Greenfly

Araneus diadematus – Garden Spider

Wasp

Bee

Managing the impact of forest school activities -

At Drake Primary School, we continuously monitor the impact on the grounds. We monitor this by checking the trees, which the forest school leader does every session when carrying out the daily risk assessment of the site. The impact on the ground is easily monitored concerning what is growing and where. If ground cover is beginning to deplete then an alternative area of the forest school site will be used or we will use Sir Frederick's Wood, which is adjacent to the school building.

By using Sir Frederick's Wood, we are able to reduce the impact to our forest school site within the school grounds. This is essential as we run forest school sessions throughout the academic year.

As we run forest schools during term time only this also gives the environment time to recover — 6 weeks in the summer, 1 week in October, 2 weeks at Christmas, 1 week in February, 2 weeks at Easter and 1 week in May.

Currently trees are newly planted and not strong enough to withstand climbing. When they are, different trees will be used to reduce damage to the trees.

Potential Damage	Actions to reduce impact	Frequency of monitoring	
Trampling Ground Flora damage Soil Compaction – leading to root-die off Soil Erosion Disturbance	 We Identify any rare ground flora e.g. Bluebells and ensure main paths avoid them when in season. We Vary route so not always treading in one area. If compaction occurring round base of specific trees we vary site frequently used. Create definite paths along main trails e.g. chippings. Teach respectful methods of searching and 	Seasonally	
 Habitats e.g. moving logs Noise e.g. nesting birds, feeding animals Collection e.g. minibeasts hunts, pond dipping 	 exploration e.g. replace logs when looking for minibeasts. Can zone some areas 'Wildlife areas' where it's just left undisturbed. Activities include creating habitats and feeding stations e.g. bird boxes and feeders, bug homes, log piles to increase wildlife. If bird nests, burrows are located we can make a 'quiet zone' around them in spring time. We teach caring methods of collecting bugs and ensure they are returned to where they are found. 		
Over-harvesting Resources – e.g. Elder, Willow, Hazel Fruits – e.g. berries and nuts Flowers	 We plant appropriate species to ensure a greater supply in the future. We Import materials from other sustainable sources (ensuring permission is sort from the land-owner beforehand). If collecting fruits and seeds, we always leave some as a food source for the wildlife. Collecting seeds for planting is part of a forest school's session and ensuring an increase of those species in the future. We can have a designated area for picking and a designated area for non-picking to ensure some are left for the wildlife, although our general agreement is no picking flowers. Do not pick rare plants. Leave them and encourage photographing and drawing them rather than picking them. 	Seasonally	
Fire effects Soil enrichment – from ash Habitat destruction – dead wood Igniting – soil (e.g. peat soils), tree roots Carbon emissions to air Smell – causing disturbance to animals Smoke – causing disturbance to animals and to the environment	 After fires we ensure all embers are put out fully. We have a designated fire area for fires. Deadwood is home to many species so we do not remove all of this. Firewood is imported from other sustainable sources, ensuring permission from landowners. Our fire site is away from tree roots. We limit the size and frequency of fires and use a Kelly Kettle to make hot drinks. 	Each visit	

 We plant trees, shrubs or plants as part of forest school ensuring they are native UK species and local to the area. Some exotic species can be invasive and detrimental to local area so we ensure these are not planted. Everything brought to forest schools is taken home or placed in storage 	Each visit

How we enhance ecology at forest school:

- Planting hedging and trees to provide habitats.
- Sow wild flower seeds for pollinators.
- Make and maintain a bug hotel to attract minibeasts and protect them.
- Make bird boxes and feeders to attract birds.
- The grass is left uncut to create a natural habitat.

We can further enhance our ecology by making bat boxes and creating a water\pond area.

Forest school's management plan for the move

Forest schools has been relocated to another site within the school grounds. This new site is at the top of the playing field. Relocation is due to 2 classrooms being built on the existing site.

Plans already taken place highlighted Yellow. Things still to do In the future not highlighted.

- Planting of hedging round perimeter of site.
- Planting of some mature trees.
- Relocation of forest schools cabin.
- Sir Fredericks wood to be used in the future to give school site time to settle and will be used to ensure impact is low to forest school site within school grounds.
- Sheltered fire site to be erected in new site.
- Pathways to be created in new forest schools site to reduce the Impact to the site when used.
- Planting of bulbs that have been removed from existing site.
- Planting of Rowan trees, Willow and Elder that I am growing at home.
- Trees being cut down in existing site will be used for logs for seating area, logs for climbing and balancing on.

 Branches and twigs for children to play with and for fires etc.
